ORACLE®

CHANGE YOUR VIEW OF APPLICATION MANAGEMENT

ORACLE ENTERPRISE MANAGER

Your company hosts hundreds of applications that serve thousands of users around the globe 24-7. And chances are that no one will take notice until one of those systems is not working up to par. Until you can locate, diagnose and fix the problem, your company loses time and money – and that's not to mention the frustrated end users losing patience and effectiveness until this process is completed.

Now you can stop application problems before they start with Oracle Enterprise Manager. This all-in-one, early-warning system proactively monitors all application processes and components down to the underlying middle-ware and databases, and even the hosts they run on.

Join us on Wednesday, 31 October 2007 at 11.00 am for a 45-minute live web seminar to discover the Oracle Enterprise Manager advantage:

- ▶ Supervise real-time or historical performance and diagnose problems early for multiple application servers and databases
- ▶ Reduce human error through extensive out-of-box automation and configuration
- ▶ Build custom monitoring tools using just the modules you need
- ▶ Minimise TCO of middleware and database management
- ▶ Simplify and lower costs of SOA management

See for yourself! Discover today how Oracle Enterprise Manager can streamline your application, middleware and database management processes:
